Drawings

New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the originally filed drawings are deemed to be informal. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Specification paragraph [0001], line 4: "also claims priority to" has been replaced with —is a continuation-in-part of—

Specification paragraph [0001], line 7: --now US Patent No. 6,994,706—has been entered just prior to the period.

These amendments have been made to provide the updated the priority claim information.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the prior art fails to disclose the particular applicator and method for treating the prostate as set forth in the claims. In particular, claim 1 recites first, second and third portions of the probe with the first portion for insertion into the penile urethral segment and the third portion for insertion into the prostatic urethral segment wherein the axes of the two sections are not collinear. Many probes disclose such an arrangement, such as Edwards et al (5,843,026 – see figure 1). However, what the prior art fails to teach is a plurality of needle electrodes mounted within the first segment, located within the penile urethral segment, such that the electrodes may be deployed substantially parallel to the urethra. Rather, the prior art devices all mount the needle electrodes in what would be considered the third portion located in the prostatic urethral portion, the electrodes being deployed perpendicular to and through the urethra wall into the prostate. With regard to method claim 15, the prior art fails to disclose the step of inserting an applicator into a patient's urethra to displace a patient's prostate gland sideways with a distal portion of the probe as set forth in the claim. Again, the prior art devices are generally either rigid, straight probes (e.g. Jones et al 6,607,529) or flexible probes (Edwards et al '026) whereby the electrodes are deployed perpendicularly into the prostate from the section of the probe located in the prostatic urethra segment.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
